SP Uncertainty Encounter Template

Case Title: Back pain/Male/Primary/Reassured

Standardized Patient Name: James Young

Gender: Male

Age: 39 y/o

Setting: Emergency Department

Primary vs. Sign-Out Patient: Primary

Emotional State: Reassured

Initial Presenting Symptoms: Back Pain

Symptoms: Resolved

SP Case Summary Guide

Summary of the Scenario:

You are a 39-year-old male patient with a history of diabetes, COPD, and obesity, and you came to the Emergency Department after developing back pain. Your symptoms began early this morning, when you noticed a sharp pulling sensation in your left lower back after getting out of bed. The pain is constant, aching, moderate in intensity, does not travel anywhere, and is worse with changes in your body position. You have not experienced any fevers, sweats, or weight loss. You have had no vaginal bleeding or discharge, and have never had a sexually transmitted disease. Your urination and bowel movements are normal. You have not noticed any numbness, tingling, or weakness.

Your symptoms have resolved after receiving Tylenol and ibuprofen in the ED.

Upon arrival to the ED a urine test was performed and you are awaiting the results.

Once the doctor updates you on your results, you feel reassured. You came to receive confirmation that this was nothing serious, and you will receive it.

Demeanor / Personality and emotional starting point:

Reassured

For the SP, to better comprehend the patient's demeanor:

Feelings	<p><i>REASSURED, came seeking specific reassurance about not having a specific condition (cancer, stroke, heart attack), etc. and has received it.</i></p> <p><i>The patient is receptive, amenable to the conversation. The patient came seeking specific reassurance about something dangerous and is ok going home without a definite diagnosis. During the conversation, the patient asks reaffirming and clarifying questions throughout the scenario. (ie – “So you are saying that I don’t have anything scary, right?”)</i></p> <p><i>When/if the physician indicates that no specific diagnosis has been found the patient responds in a reassured manner, “I feel so much better knowing this”.</i></p>
-----------------	---

Instructions for the SP during the conversation:

- Greet the physician upon entry into room.
- Express that you are reassured about how you are feeling physically right now. (e.g. symptoms better)
- Share that you feel reassured with the results so far when they are disclosed to you as normal.
- Ask what the physician sees in your evaluation that can explain your symptoms.
- When/if the physician indicates that no specific diagnosis has been found, you respond that you are reassured.
- You can express your reassured state with the following phrases at appropriate parts of the conversation:
 - “So it doesn’t look like anything serious? That’s such good news.”
 - “As long as we aren’t finding anything scary, I’m ok.”
 - “Thank goodness. I was worried you’d find something terrible.”
- INSTRUCTIONS FOR SPECIFIC CHECKLIST ITEMS
 - *Item 2: Anyone to be included in conversation, if the physician asks if you want to call anyone to be included in the conversation, DECLINE to call anyone*
 - *Item 7: Anything else expected during visit, if the physician asks if you were expecting anything else to be done during the visit, state that you were NOT EXPECTING to have anything else done*

Questions for the SP to ask the physician (goal with these questions is to not prompt a specific checklist item but rather to provide a prompt for ongoing conversation, if needed. Avoid questions that could lead to specific prompting of checklist items.)

- “So, what is next?”
- “Should I be concerned about this?”
- “So, what do I tell my family?”

Closing Comment (if needed): “Thanks for trying to help me today, I feel reassured, and appreciate your time and explanation.”

*Only use this closing comment if the physician is no longer making any progress through the checklist and not responding to generic prompts provided above.

Specific comments for each item on the checklist relevant to this case:

INTRODUCTION

1. Explain to the patient that they are being discharged.
YES if: *Physician makes reference to patient being discharged or going home before discussing the result.*
2. Ask if there is anyone else that the patient wishes to have included in this conversation in person and/or by phone.
YES if: *Physician asks if there are any other people the patient would like to be included before discussing results or next steps.*
SP INSTRUCTION: *decline to call anyone (if asked)*

TEST RESULTS/ED SUMMARY

3. Clearly state that either “**life-threatening**” or “**dangerous**” conditions have not been found.
YES if: *Physician specifically uses EITHER the term “dangerous” or “life-threatening” and explains that these conditions have not been found*
Example: *“We didn’t find any life-threatening conditions for you today.” Or “Your results did not show any dangerous conditions.”*
NO if: *Physician uses other words/phrases (e.g. “emergencies” or “serious”)*
Example: *“Once we don’t find any serious conditions, it’s safe to go home.”*
4. Discuss diagnoses that were considered (using both medical and lay terminology).
YES if: *Physician gives at least a lay terminology description for at least one diagnosis considered.*
Example: *“Today we looked for several things to explain what was causing your back pain. We did a urine test, which did not show signs of blood or infection in your urine.*
NO if: *Physician only uses medical terminology without validating understanding of these terms OR uses broad statement to discuss what was considered.*
Example: *“We were looking for nephrolithiasis or pyelonephritis.” Or “we were looking for any problems causing your back pain.”*
5. Communicate relevant results of tests to patients (normal or abnormal)
YES if: *Physician puts any normal or abnormal results into clinical context for the patient.*
Example: *“Your evaluation testing was normal. Given your results, we do not feel you are having a kidney stone or kidney infection.”*
NO if: *Physician states normal findings, but not with any context or explanation of relevance.*
Example: *“Your urine test was normal”*

6. Ask patient if there are any questions about testing and/or results
YES if: *Physician asks for questions immediately after explaining the testing/result.*

7. Ask patient if they were expecting anything else to be done during their encounter - if yes, address reasons not done
YES if: *Physician asks whether patient was expecting anything else to be done – this may include questioning about anticipated tests, consults, or other needs.*
Example: *“Were there any other tests you were expecting to have done today?”*
NO if: *Physician discusses additional testing, but the physician does not explicitly ask whether patient was expecting anything else to be done. Regardless of whether a patient has already asked about or requested additional tests (e.g. stress test), the physician MUST EXPLICITLY ask the patient about any other expectations.*
SP INSTRUCTION: *state that you were not expecting to have any other testing done (if asked).*

NO/UNCERTAIN DIAGNOSIS

8. Discuss possible alternate or working diagnoses
YES if: *Physician mentions other possible diagnoses using a lay terminology description (can also use medical name, but needs to include a lay description).*
Examples: *“I think your back pain may be due to the muscles in your back.” OR “I am not really sure what is causing your back pain right now. I would like you to follow up with your doctor for additional testing.”*

9. Clearly state that there is a not a confirmed explanation (diagnosis) for what the patient has been experiencing
YES if: *Physician informs the patient that there is not currently an explanation for their symptoms. This can be done using words such “uncertain diagnosis” or “no cause found” or “we do not know what is causing your abdominal pain.” It is OK if the physician also offers some possible explanations for symptoms which are diagnoses that are not able to be confirmed in the emergency department.*
Example: *“At this time, we do not know why you have back pain. It may be because of spasm in the muscles in your back; however, with the tools we have available, we can’t tell you for sure here in the emergency department.”*
NO if: *Physician states that “there is nothing wrong with you” or some other global statement about the patient having nothing wrong (instead of a focus on cause of symptoms).*

10. Validates the patient’s symptoms
YES if: *Physician makes an empathetic statement re-assuring the patient that they understand/believe that they are still experiencing symptoms (e.g. pain)*
Example: *“I understand that you are in pain. Even though our tests have not found a cause of your pain, that doesn’t mean that you are not experiencing pain.”*

11. Discuss that the ED role is to identify conditions that require immediate attention
YES if: *Physician conveys the idea that the role of the ED/observation unit is to identify and address conditions that require urgent evaluation or management*
Example: *“Our job as emergency medicine physicians is to find immediately life-threatening problems.” OR “The tests that we run in the emergency department are focused on finding problems that need immediate treatment.”*

12. Normalize leaving the ED with uncertainty
YES if: *Physician explains that not all conditions can be diagnosed, as some things just get better with symptom support.*
Example: *“For many patients, we are able to ‘rule out’ lots of dangerous things, but we can’t give them an exact name for what is happening.” OR “A lot of our patients go home without a clear explanation for their symptoms.”*

NEXT STEPS/FOLLOW UP

13. Suggest realistic expectations / trajectory for symptoms
YES if: *Physician addresses what to expect for a timeline or course of symptoms. In some cases, this may be a clear statement of not knowing how long symptoms may continue (it is okay for there to be uncertainty).*
Examples: *“Although I cannot tell you the exact cause of your back pain, in most patients with similar pain, the pain goes away within 2-3 days.” OR “At this point, I can’t tell you how long this pain may continue.”*

14. Discuss next tests that are needed, if any
YES if: *Physician discusses any potential next tests that may help further explain the cause of symptoms, or clearly states that no further testing is needed.*
Examples: *“Your outpatient doctor will help to decide if you need more tests – sometimes people get better without any more testing after the ED.” OR “back pain with the normal urine test you had today is reassuring, and I do not think you need any additional testing at this moment, unless your symptoms come back.”*

15. Discuss who to see next AND in what timeframe
YES if: *Physician discusses both who the follow-up care should be with AND when it should ideally occur, or physician explicitly states that no follow-up is needed.*
NO if: *Physician does not address BOTH who and when for the follow up.*

HOME CARE

16. Discuss a plan for managing symptoms at home

YES if: Physician provides at least one suggestion for how to treat/manage symptoms after leaving the emergency department. Can be medication, another therapy, or even a suggestion such as “try to apply warm packs to your back and do gentle stretching.”

17. Discuss any medication changes.

YES if: Physician specifically discusses whether new medication has been prescribed and/or existing medication is to be stopped. Or physician states that there are no medication changes.

NO if: Physician does not address medications at all

18. Ask patient if there are any questions and/or anticipated problems related to next steps (self-care and future medical care) after discharge

YES if: Physician asks whether patient has questions about and/or anticipated problems related to managing symptoms or other tasks related to caring for oneself after discharge and/or obtaining future medical care (such as making appointments, identifying specialists, etc) after discharge.

REASONS TO RETURN

19. Discuss what symptoms should prompt immediate return to the ED

YES if: Physician provides detail about specific symptoms or other events (such as lack of resolution of specific symptoms within XX timeframe or development of new symptoms) that should prompt return to the ED

Example: “If your pain comes back and it is not improving with Tylenol or Ibuprofen, or you notice you can’t pee or you have a fever, then you should return to the ED immediately.”

NO if: Physician makes only vague statements about reasons to return, such as “return if you feel worse.”

GENERAL COMMUNICATION SKILLS

20. Make eye contact

YES if: repeated and/or sustained eye contact.

21. Ask patient if there are any other questions or concerns
