

COMMUNITY PARTNER TRAINING

A NEW HUMAN RESEARCH PROTECTIONS
PROGRAM FOR COMMUNITY RESEARCH

<http://cptraining.med.upenn.edu>

WHY INVOLVE COMMUNITY MEMBERS IN RESEARCH?

Community-engaged research:

- Ensures research is useful and relevant to the lives of real people
- Ensures the views and voices of community members are included in important research decisions
- Facilitates co-learning between academics and community members

Community research partners:

- Know their community's needs, preferences, strengths, and weaknesses
- Have ideas about how to approach problems within their community
- Are committed to local health issues

COMMUNITY RESEARCH PARTNERS

Community-engaged research may include partners from:

- Community organizations
- Patients and families
- Religious congregations
- Neighborhoods
- Schools
- Etc.

Examples of community involvement in research:

- Participating in a Community Advisory Board
- Providing input on recruitment methods
- Collecting data
- Helping to disseminate information

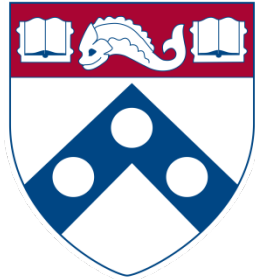

REQUIREMENTS FOR COMMUNITY RESEARCH PARTNERS

- In certain circumstances, community partners may be considered investigators who are “engaged” in the research
- The activities that qualify a collaborator as an investigator include:
 - Interacting or intervening with research participants
 - Consenting participants
 - Participating in the collection of or having access to identifiable data
- If a community collaborator is considered an investigator, than human subjects training is required

COMMUNITY PARTNER TRAINING

<http://cptraining.med.upenn.edu>

A collaboration between the Community Engagement and Research (CEAR) Core of the UPenn CTSA and the UPenn Human Research Protections Office

COMMUNITY PARTNER TRAINING

- The training features materials from the CIRTification curriculum (developed at the University of Illinois at Chicago), a human research protection program tailored to meet the unique needs of community research partners.
- It is relevant to the roles and responsibilities of community partners participating in a research project and focuses on skills-building.

How to Create a Project as a Study Coordinator

First, create an account as a study investigator or research coordinator.

login

Community Partner Training

A Human Research Protections Training Program

Are you a study investigator or a research coordinator?

Enroll and manage your research projects. Monitor your community partners' training status.
